CHAIRS

The four-on-the-floor design of this chair provides plenty of stability for health care, geriatric and food service settings. The 1-inch steel tube frame is finished in powder epoxy, and an optional self-skinned urethane armcap is available. Seat and back are separate moulded plywood components, finished in lacquered birch veneer, or covered with high density foam and upholstered.

Utah stacks six high flat on the floor, and up to ten high on the available dolly.
