# BEAM SEATING

For high volume waiting areas, the Tom seat is matched with a range of tables and a sturdy support system. Epoxy finished beams are of 2-1/2 inch steel tubing on steel tube legs with cast feet in epoxy or chrome. Seats are moulded foam over a rigid urethane inner-shell with zippered slipcovers, or lacquered birch veneer plywood. Tubular steel arms are available.

Tom beam mount seating components are adaptable to fast food, lecture theatre and other applications on a custom order basis.
