LOUNGE SEATING

An inverted 'U' frame of 1-1/2 inch steel tubing provides the stability of four legs on the floor. Seats are zippered slipcovers over moulded foam with steel tube inner frames, and are available as one piece, or with separate seat and back. The 17-1/2 inch seat height and the stable, four-leg frame design make Stable especially appropriate for health care applications.

Complementary benches and occasional tables are available. Stable is also offered as a continuous link seating system.
